## Networking topologies

Up to 32 fire control panels and fire control terminals can be connected in a single cluster (FCnet/SAFEDLINK) or up to 16 stations when the cluster is connected to a danger management system.

Using a fiber-optic Backbone (FCnet/LAN) up to 14 of the above mentioned clusters (with up to 16 stations each) can be networked. The entire network may contain up to 64 stations.

→ For details about system networking, please refer to product data sheet 008955.

## Characteristics

---

- The FC2060 is a modular fire control panel with integrated operating unit for large installations and for modernizing large older fire detection installations.
- The FC2060 processes signals from Sinteso, collective MS7/9/24, DS11, Synova 600, SIGMACON and addressable MS9i devices.
- An integrated card cage with 5 slots allows
  - FDnet line cards FCL2001-A1 to be used (for extra lines)
  - Collective line cards FCL2002-A1
  - MS9i line cards FCL2003-A1
  - I/O card FCI2008-A1 (with 12 programmable inputs/outputs)
- Mixed use of all line and I/O cards possible.
- In the event of a defect, the extra line cards can be replaced without the control panel having to be powered down.
- The fire control panel may be used as a stand-alone unit or networked.
- Using the user-friendly engineering tool SintesoWorks, the control panels can be configured to create a customized solution.
- Adaptation of customer texts on the terminal itself or using the configuration tool.
- Up to 2000 events can be stored and recalled according to various criteria.
- Automatic daylight saving time switchover.
- Integration to Siemens Danger Management System.
